Effects

- Psychoactive: Users report euphoric and relaxing effects.
- Social: Some find it enhances creativity and focus, making it suitable for socializing or creative tasks.
- Physical: Potential for body relaxation, pain relief, improved sleep, and increased

appetite.

Potential side effects and risks

- Short-Term: Dizziness, drowsiness, dry mouth, increased appetite, fast heart rate, and anxiety.
- Long-Term: Cannabis use disorder, lung problems from smoking/vaping, increased risk of heart disease, depression, and cannabis hyperemesis syndrome (severe nausea and vomiting).
- Interactions: THC can interact with certain medications, including sedatives, anti-anxiety drugs, antidepressants, pain medications, anticoagulants (blood thinners), and others, potentially leading to increased drowsiness, bleeding complications, and other serious side effects. According to Sharp HealthCare, THC can interact with nearly 400 prescription medications. Consult with a doctor or cannabis specialist before using if taking other medications.
